

9/11 1A Evaluation of an Experiment

1. If you expose plants to sound they will grow better.
2. Started w/ beans → set up greenhouses → planted beans
played sounds → recorded growth
3. Silence
4. water amt & delivery, soil, size of pot, type of plant, same
area, same style green house, CO₂ levels, non-stop sound
5. Who was talking, volume, vibrations
6. needed to be done separately, needed to consider ambient
sound
7. - discussed
8. sound grew better than silence - yes
9. - discussed
10. - more tests, variety of plants, separate spoken vs. music
11. - focus on different characteristics of the music (tempo, key)
- focus on volume of same music
- focus on presentation of vocals in music
- test what is being said - all in the same manner
