

4.18 reagent

a)  $\text{HNO}_3$

b)  $\text{Br}_2$

c)  $\text{HNO}_3$

$\text{H}_2$

Catalyst

$\text{H}_2\text{SO}_4 + 30-40^\circ\text{C}$

$\text{FeCl}_3$   $\text{FeX}_3$

$\text{H}_2\text{SO}_4$  (Step 1)

$\text{Ni}$ , 3atm (Step 2)

4.21 phenols can act as acids

which alone are insoluble in  $\text{H}_2\text{O}$ , but if reacted w/ a strong base they can form a water soluble salts.

Cyclohexanol does not act as an acid and will not undergo this reaction.

4.19 a) step 1  $\text{HNO}_3$   $\text{H}_2\text{SO}_4$

step 2  $\text{H}_2\text{SO}_4$  heat

b) step 1  $\text{Br}_2$   $\text{FeCl}_3$

step 2  $\text{Cl}_2$   $\text{FeCl}_3$

11/10/16 Alcohols, Ethers + Thiols

Alcohol - OH (hydroxyl)

Nomenclature:

IUPAC - Determine PC and # so that the hydroxyl group has the lowest # possible  
 Carbon # prefix - an/en/yn - ol

Common name - name PC as a branch followed by -alcohol

$C_2H_5OH$	$C_3H_7OH$ <small>no location for OH</small>	$C_3H_7OH$	
$C_2H_5OH$	$C_3H_7OH$	$C_3H_7OH$	$C_4H_9OH$
IUPAC 1-ethanol	1-propanol	2-propanol	2-methyl-2-propanol
Common name n-ethanol	n-propanol	isopropyl alcohol	t-butyl alcohol
Common name ethyl alcohol	propyl alcohol	aka: rubbing alcohol	

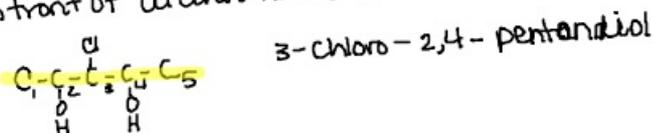

Classifying Alcohols: Determined by the # of C attached to the C-OH

1° alcohol - one C attached  
 $HO-C-C-R$

2° alcohol - two C attached  
 $HO-C-C-R$   
 $\quad |$   
 $\quad R'$

3° alcohol - three C attached  
 $R-C-C-C-R'$   
 $\quad |$   
 $\quad H$

Determined by # of hydroxyls attached  
 Use a numeric (standard) prefix to indicate # of -OH, locators go in front of alcohol name but behind branches.

\* Glycerol  $R-C-C-R'$  two or more hydroxyls side by side  
 $\quad | \quad |$   
 $\quad O \quad O$   
 $\quad H \quad H$

## Properties of Alcohols:

1. Toxic
2. Flammable
3. Relatively high B.P. —  $\uparrow$  B.P. as molecule gets larger  $\uparrow$  B.P. w/ increase of hydroxyls
4. Polar — hydrogen bonds
5. "Universal Solvent" of the organic world.
6. Soluble in  $H_2O$  — the larger the PC, the lower the solubility  
the larger the # of hydroxyls  $\uparrow$  solubility.
7. alcohols are weak acids
8. volatile
